DETAILED ACTION

Page 2

Inventorship

1. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 3. Claims 1-4 are rejected under 35 U.S.C. 102(e) as being anticipated by Demura et al (US 7159565).
- 4. The applied reference has a common assignee and inventor(s) with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference

was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Re claims 1, and 4, Demura et al disclose the controlling ignition timing method includes an in-cylinder injector (11), and an intake port injector (12) [Fig. 1]; note abstract, and column 4, line 65 through column 5, line 30, which describes the relation of knock and ignition timing (when the knock occurred, the final ignition timing is retarded by a prescribed amount, if it is determined that no knocking has occurred, the final ignition timing is gradually advance). Also note Figures 3, and 5, which describes the relations between the retard-corrected control and amount of fuel from in-cylinder injector (11), and intake port cylinder (12).

Re claims 2, and 3, Demura et al further teach the ECU (30) carries out knocking determination for determining whether or not knocking has occurred in each cylinder, based on a result of detection by knocking sensor (34), and exert knock control for adjusting the ignition timing, warm-up characteristic control for appropriate advance or retard in accordance with the temperature of the cooling water or adjustment and control during the transition (column 4, line 65 through column 5, line 7; and Figs. 4, 6), which includes an initial value, and attenuation rate of a retard correction amount.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Mayashita (US 7134420), Fujiwara et al (US 6947828), Kinose (US 6877482), and Miyama (US 5267164).

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Johnny H. Hoang whose telephone number is (571) 272-4843.

Application/Control Number: 10/566,591
